

Lab 05

1. Create a Model – POJO Class called Book with the following Data members

bookId : int

bookName : String

authorName : String

Create an application and allow the user to Populate the Book Objects into the ArrayList and also enable the User to Display the Book Objects on the Console(You can add Sample Records)

2.

Create an application which allows the users to populate the ArrayList with Names of Fruits and allows the User to view the fruits both in the Inserted Order and Reverse Order

3.

Create an application which allows the user to add the Numbers for a given range say 1 to 10, 1 to 20 etc based on the users need , **into an ArrayList** and allow the user to find the sum of only the even Numbers from this List and print the result
